PROBLEM

SCAN REPORTS ARE JARGON WITH NO SAFE FIX. UNTESTED PATCHES CAN BREAK THE SITE OR LEAVE THE HOLE OPEN.

HOW ATTACKERS GET IN

ATTACK PATHS FOUND OPEN IN VIBE-CODED APPS, % OF 100 SCANNED APPS

WHO IT'S FOR

FREELANCERS AND SMALL DEV TEAMS WHO BUILD WEBSITES FOR CLIENTS, WITH NO SECURITY TEAM, TIME OR BUDGET.

CASE STUDIES

THE 1.78$M MOONWELL HACK

TARGET- Moonwell Decentralized Finance Protocol
THE MISTAKE- Developers deployed AI-generated smart contract code directly to production without a human mathematical audit
THE FLAW-The AI misconfigured the pricing formula, incorrectly valuing a $2,200 digital asset at only $1.12.
THE EXPLOIT-Hackers and automated bots instantly bought the artificially cheap collateral and drained the liquidity pools.

THE FIREBASE OPEN-DATA DISASTER

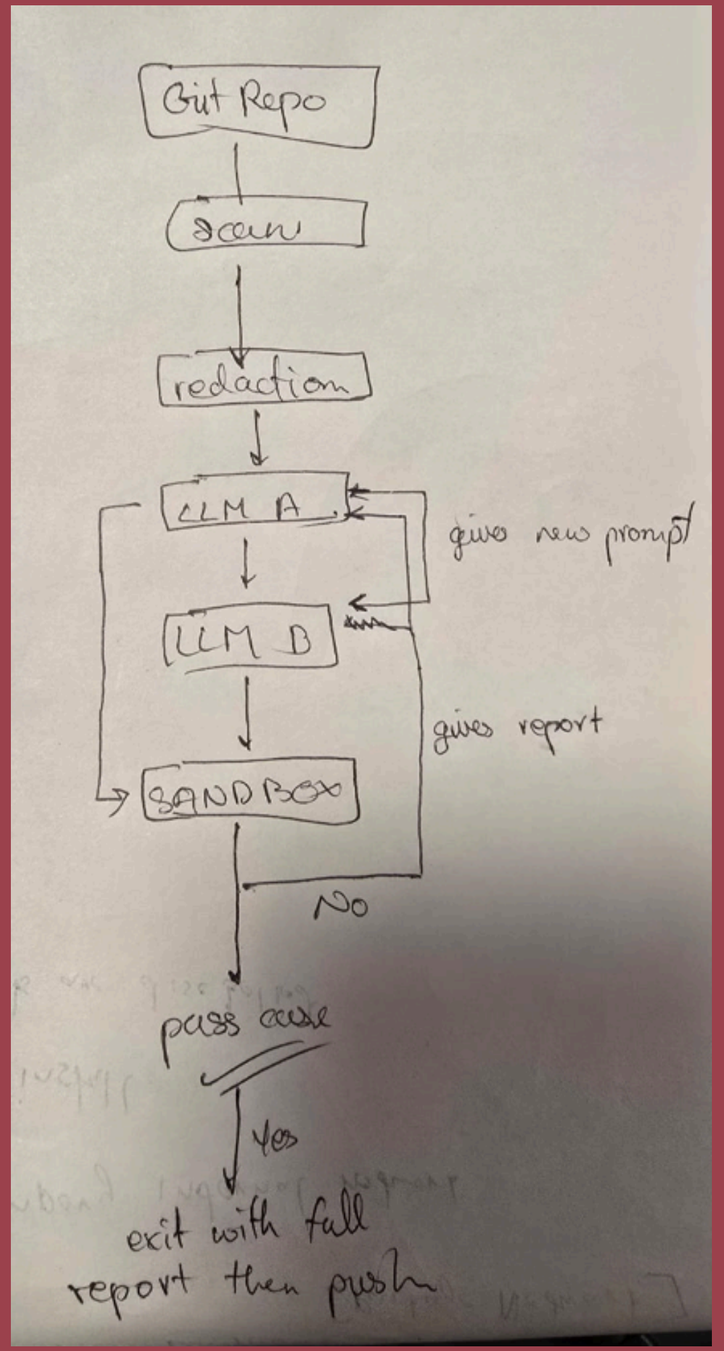

TARGET- A FAST-GROWING B2B SAAS PLATFORM
THE MISTAKE-RELYING ON AI TO AUTOMATICALLY GENERATE BACKEND DATABASE RULES WITHOUT SETTING UP EXPLICIT ROW-LEVEL SECURITY

THE FLAW- THE AI SECURED THE VISUAL FRONTEND BUT WROTE A HIGHLY PERMISSIVE BACKEND POLICY ALLOWING ANYONE FULL DATABASE ACCESS
THE EXPLOIT-406 MILLION SENSITIVE CUSTOMER RECORDS, USER PROFILES, AND OPERATIONAL METRICS WERE COMPLETELY EXPOSED

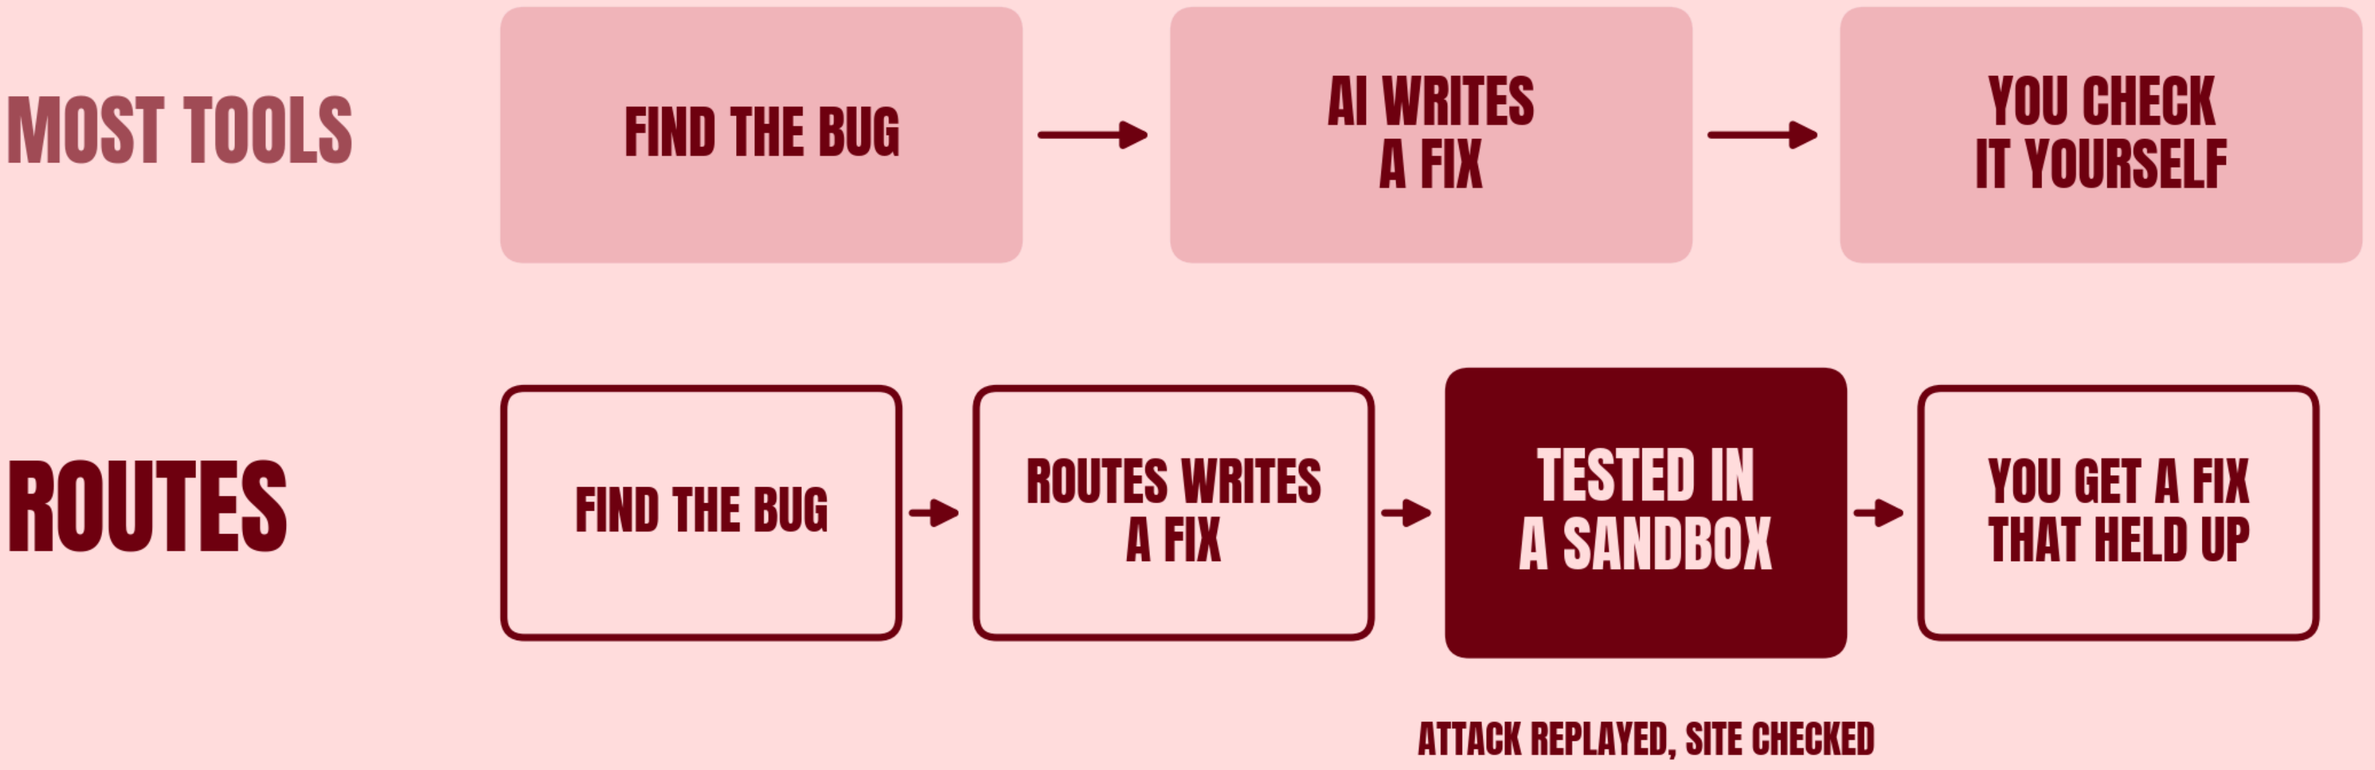

OUR SOLUTION

WE ALWAYS **VERIFY** THE SOLUTION

BEFORE GIVING IT TO YOU!

WHY OUR IDEA STANDS OUT

IF A FIX FAILS, THE AI TRIES AGAIN. IF IT STILL FAILS, A PERSON TAKES OVER.

FUTURE PLANS

- Batches
- More attacks covered
- A proper desktop application
- Failure and Common issues memory
- Expanding the supported tech stack
- Being able to monitor logs and eliminate suspicious entities.
- Feedback loop

THANK YOU
